

Why just monitor your assets when you can protect them?

GPS monitoring providers only track the location and movement of vehicles. That approach leaves the actual assets unprotected and vulnerable to theft.

If you are tracking driver efficiency but not protecting your valuable assets you could be losing far more than several cents per mile.

Why Nuve?

The only comprehensive asset protection solution using custom-built sensors for both fuel and cargo theft. The Nuve solution also provides remote monitoring via web or mobile devices.

Solution Components:

- Fuel Protection System
- Cargo Protection System
- Asset Protection Portal
- Mobile app for iOS and Android
- Rules-based incident reporting
- Integration with existing GPS devices

Austin, TX 78731

Organization

One of the largest commercial construction companies in North America with nearly 20 regional offices and over a hundred concurrent construction sites at any given time. The company owns a fleet of several hundred trucks as well as heavy machinery.

Customer Challenge

The company was experiencing fuel theft in excess of \$2,500 per month at a single project site. In an effort to prevent the ongoing fuel theft, the company had previously tried using both ultrasound and fuel-level sensors. The thieves were very creative and always seemed to be able to circumvent the company's preventative measures.

Solution

The Nuve Fuel Protection System was chosen for its comprehensive answer to a very costly problem. Components of the system installed included tamper resistant sensors to protect all entry/exit points - from the fuel cap to the filter – as well as the Nuve monitoring portal.

The portal alerts management instantly of fuel theft attempts including location and time. This portal is available 24x7 and forwards alerts and messages from the hardware sensors via Email or SMS. The Nuve mobile app proved to be extremely valuable to the site project general manager, who is away from a desk much of the time. Historical reporting and remote control for important operations such as activating/deactivating cabin door locks and enabling/disabling the ignition are also options.

“The Nuve Solution has more than paid for itself in just 5 months after the installation. In the location we chose for our pilot program, we have nearly eliminated fuel theft.”

-VP of Commercial Construction

Results

The solution generated significant savings. Within the first month of deployment at the problem construction site, the Nuve system had nearly eliminated fuel theft. Months later after the full deployment was in operation, the company reported that fuel theft was nearly eliminated – thus easily offsetting the cost of the Nuve system. With the system now installed at more than half of all active project sites the company's management can both react on a tactical basis to each incident while also analyzing summary reports each month to better optimize their training and internal processes. Whenever a fuel sensor is intentionally tampered with, both the location and time are recorded creating a significant deterrent to future fuel thefts.
